Project Idea

(^_^) (^^) (^-^) ^^	미소짓는 모습	(^o^)	웃는 모습
(^_^; 경멸적어하는 모습		(*~*) (o)	놀란 모습
(~_~) (T_T)	우는 모습	(@_@)	눈이 뱅글뱅글 도는 모습
^^ (^^* ^^// ^///^ -///- -_* \\^w^//	부끄러워하는 모습	(-_-) (--)	눈을 가늘게 뜨고 불만을 표시하는 모습
=^.^=	고양이	U•ε•U	개
◀◀:=	오징어	○::=	문어
/^o^\ 후지산 (웃는 모습의 변형)		_0_	할장 (손모아 인사하는 모양)

π_π T_T T.T ππ T_T T_T T_T T_T π_π π_π	우는 모습	o s o o o o o s o L o 7	놀란 모습
-_~^	한쪽 눈썹 치켜세우기	@_@	뱅글뱅글
^~^.....	땀을 흘리는 모습	^^ ^^ ^^	눈 웃음
---	모음 'ㅡ'를 이용한 빠진 모습	o π o	토하기 또는 침흘리기
^..^< ^^7 ^..7 ^..7	충성하는 모습		

:-) :) =)	미소짓는 모습	:-(:()-:	슬픈 모습
:-(-; :-)	우는 모습	:/	불만에 찬 모습
:	말을 안 하는 모습	:-D :D	웃는 모습
:-P :P	메롱	;-) ;) (;	윙크짓는 모습
B-) 8-)	선글라스 낀 모습, 안경 쓴 모습	:-O :O	놀란 모습
XD	배꼽을 잡고 웃는 모습	:V	입을 크게 벌린 모습
<3	하트		

- 92% of the online population uses emoji daily.
- Emojis are processed by the brain as non-verbal information.
- Comments and shares in SNS increase by 33% when emojis are present.

Ten Years of Emoji Use on Twitter: 2011 - 2021

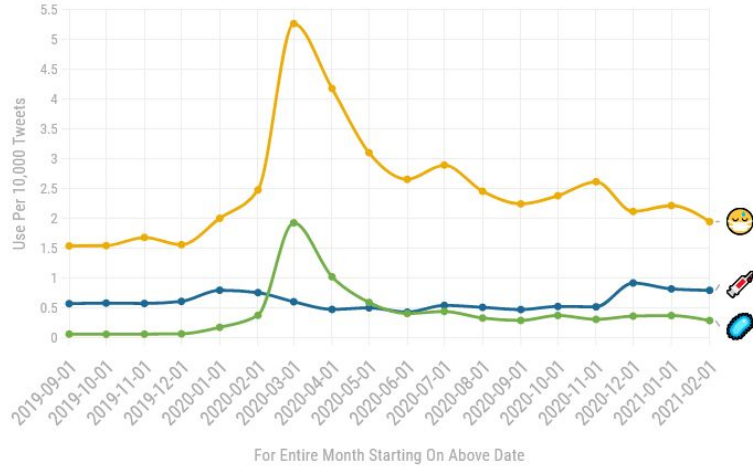

Source: Emojipedia analysis of over 6.5 billion global tweets dated between 2011-09 and 2021-07
[Published July 2021]

Usage of the COVID-19 Related Emoji on Twitter

Source: Emojipedia analysis of 976.7 million tweets dated between 2019-09-01 and 2021-02-25.
[Published March 2021]

Utah is the happiest place in 🇺🇸, according to emojis

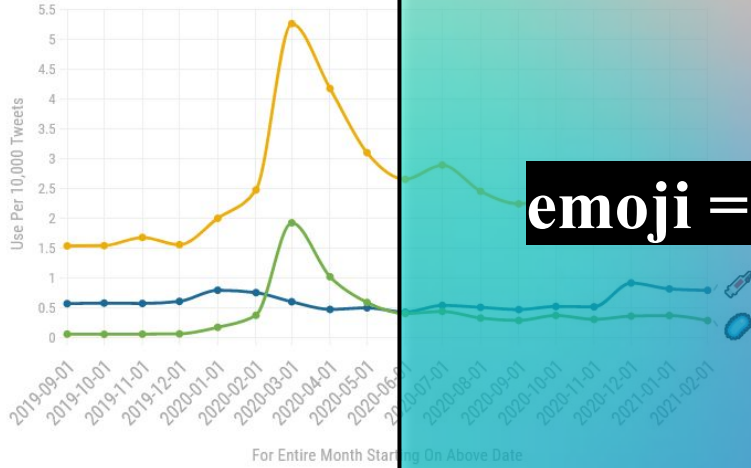

The image below reveals the states with the highest percentage of positive emojis in their tweets:

Key Components of Our Approach

- ML based Face Detection
- Graph Structured Emoji Classification

Target Users

1. Creature of Habits
2. Emotionally-Drained
3. Elderly
4. Young

4. Young

Demo

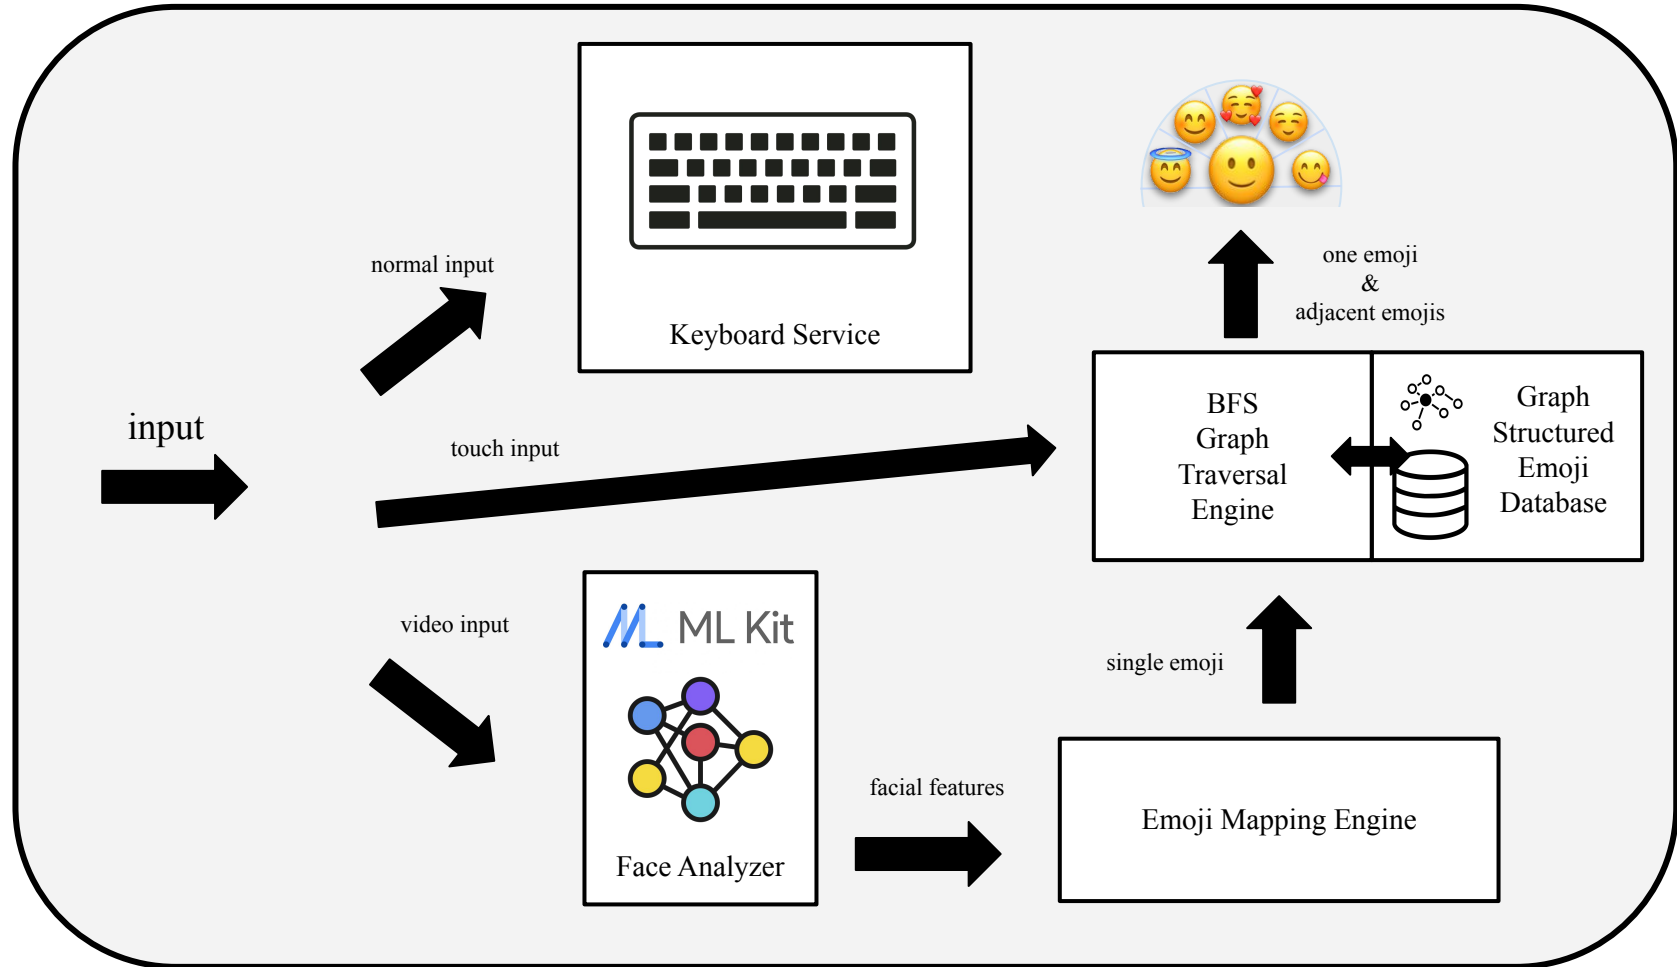

Demo

- Basic Keyboard, with Camera Feature Integrated.
- Analyzing Real Time Video and Extract Facial Information

System Architecture Overview

emoji graph would be like...

Key Technical Challenges & Solutions

Challenge & Solution

- Challenge

As Hangul letter is combination of consonants and vowels, naïve implementation of keyboard makes Hangeul output separated, such as “안녕” into “ㅇ ㅣ ㄴ ㄴ ㅋ ㅇ”.

- Solution

We designed 4-states automata. Each state represents initial state, 초성이 들어온 상태, 중성이 들어온 상태, and 종성이 들어온 상태. This states enable proper processing of consonants and vowels in Hangul.

Challenge & Solution

- Challenge

With a class which inherits `AppCompatActivity`, it is impossible to make a keyboard application that is usable in other applications.

- Solution

We made an application as a service form. We defined a class which inherits `InputMethodService`, and processed keyboard input with `currentInputConnection` object.

Challenge & Solution

- Challenge

KeyboardCamera class is not a context and does not have a lifecycle, which does not fit with CameraX api.

- Solution

We made KeyboardCamera class include a 'service' to have a class, and inherit LifecycleOwner interface to have a lifecycle.

Challenge & Solution

- Challenge

It is difficult to keep the text erased by pressing and holding the backspace button.

- Solution

We added `onTouchListener`, and made `action_down` event to keep erasing the text. In order to add feedback to the backspace button, we had to modify `isPressed` property of the view programmatically.

Challenge & Solution

- Challenge

It is impossible to pass face information to FaceContourOverlay in FaceAnalyzer class, which is necessary to display face to screen.

- Solution

We made an abstract interface in FaceAnalyzer class. Then, we added createFaceDetector function which returns FaceAnalyzer instance, and passed face information with implementing abstract interface.

Challenges to be Addressed

- Mapping face detection results to single emoji.
- Make graph of emojis with respect to their similarity in meaning & context.

Project Schedule

Timeline

	2021. 11. 10	2021. 11. 11	2021. 11. 12	2021. 11. 13	2021. 11. 14	2021. 11. 15	2021. 11. 16	2021. 11. 17	2021. 11. 18	2021. 11. 19	2021. 11. 20
곽준호 김선준 박지호 박종석	Research academic articles regarding relationship between facial landmarks & emotion						Implement prototype of emoji recommendation

	Cont.					Final app building and prepare presentation					
	Cont.										

Final Deliverable

Final Deliverable

- A Keyboard app with novel emoji interface.
- The interface first receives video input of face.
- Then it recommends corresponding emoji, with several similar emojis.
- User can select specific emoji, and choose whether to
 - continue traverse from that emoji
 - or type that emoji
- User can personalize recommendation engine.

Success Criteria

Success Criteria

- Accuracy
 - Intended emoji should be recommended with 80% accuracy.
 - Searching specific emoji in mind should be done in at most three step.
- Latency
 - Face detection should be done in 1 second.
 - Latency of processes other than face detection should be negligible.
- UI/UX
 - Graph traversal should be done in intuitive manner.
